

B1

6. A transcription system used to convert words spoken during a transcription proceeding to a textual form for real time display, the transcription system comprising:

- a transcriber that produces, in real time, transcript text representative of spoken words;
- data storage that stores data representative of an image of at least one document relating to the transcription proceeding;
- a user input device supporting the selection of the at least one document and;
- a screen that displays the transcript text as it is produced and the image of the at least one document for viewing.

B2

13. A transcription system used to convert words spoken during a transcription proceeding to a textual form for real time display, the transcription system comprising:

- a transcriber that produces, in real time, transcript text representative of spoken words;
- a communication link;
- data storage that stores data representative of an image of at least one document relating to the transcription proceeding;
- a screen;
- a processor that receives the transcript text in real time from the transcriber via the communication link; and
- the processor, as the transcriber produces the transcript text, directing display on the screen of the transcript text and the image of the at least one document for viewing.

B3

22. A method used during a transcription proceeding for viewing transcript text and an image of at least one document, the method utilizing at least a stenographic system, a screen, data storage, and a user input device, the method comprising:

- converting, using the stenographic system, representations of spoken words to transcript text in real time;
- displaying the transcript text on the screen for real time viewing;
- accepting, via the user input device, at least one input selecting a first document stored in data storage; and
- displaying on the screen an image of the first document.
